COMPASS
Capital Program/Project Management System

Version 10.5 highlights

✓ Program Management Controls

✓ Bond Expenditure Tracking

✓ Project Cashflow Module

✓ Multiple Budget Templates based on Delivery Method

## Facilities Lifecycle Software Solutions

Are you using Excel for your project management? Do you want to have your own set of books in lieu of PM/CM's reports? Is your current system not fulfilling your reporting needs? If you answered "yes" to any of these questions, we may just have the right solution for your campus to take the lead and be in full control of your capital program with our COMPASS system.

Lack of coordination and communication among specialists usually results in project cost overruns and delay in project delivery. In the end, it is the owners who provide the resources and call the shots, so why not take control of your project information and provide the best cloud-based system to your professionals.

COMPASS was designed and developed in collaboration with Campus Architects, Vice Chancellors, Directors and Project Managers at the University of California, Cal State University, Community Colleges and K-12 Districts. COMPASS has been a Work-In-Progress for the past 30 years and with the new release of version 10.5, all your project management tools are now within one application. From initial budgeting and expenditure tracking to cost forecasting and projects schedule, COMPASS includes all the necessary modules to successfully drive your capital program forward.

It's Project Management from the Owners' perspective!
