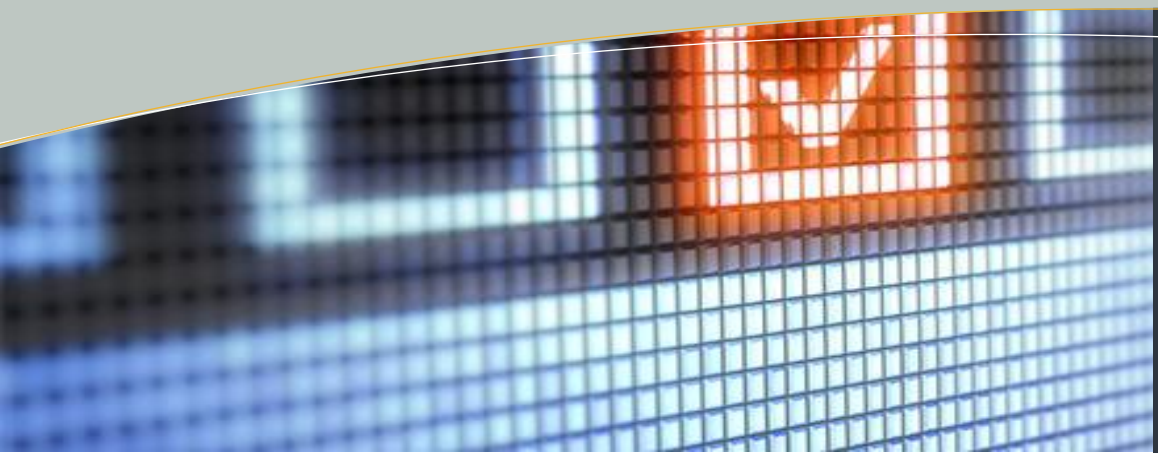
TEMPEST

Campus Utilities Analytics and Planning



Version 2.5 highlights

- ✓ Energy usage by department, building, room and campus-wide
- ✓ Monthly Energy Report
- ✓ Well water tracking
- ✓ Central Plant production
- ✓ Multi-level of sub-metering

Facilities Energy Software Solutions

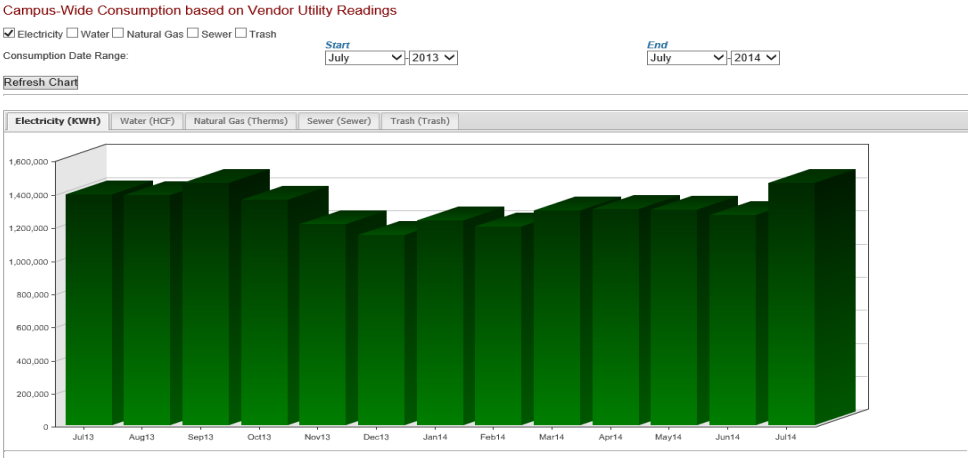
In today's world of cost cutting and environmental concerns, we must manage our energy and utility related consumption. Utility costs represent the second major expenditure only behind staffing.

TEMPEST is the ideal tool for FD&M administrators, the utility departments, facilities management, finance and top management. TEMPEST enables budgeting, monitoring and understanding the usage and cost patterns of energy and other utilities.

TEMPEST is integrated with our asset and space management system Navigator, thereby giving management the ability to relate usage and costs to specific buildings and rooms. Allocation by room usage type is included. Common Area usage along with categories like parking structures, athletic facilities and irrigation are broken out.

TEMPEST can focus on any of the following: utilities usage, alternative fuel, carbon foot print, water usage, irrigation and sewage. It captures the data from sensors, meters, billing statements and external sources. Reports and graphical output allows management to keep track of costs, usage and comparison to budgets. Information is available on departmental and building levels and can be rolled up level by level.

TEMPEST provides a straightforward integrated, cloud-based way to manage your energy and utility usage and costs. Call 877.768.3334 or email us at sales@logicdomain.com for an online / onsite demo!



Product Features and Benefits

- ➢ Management budgeting and cost monitoring of energy and utility usage
- ➢ Meter, sensor and utility bill data sources
- ➢ Ability to allocate usage factors not only by room but by room type through our Navigator product
- ➢ Common Area break-out reporting, plus general usage, i.e. athletic facilities, parking and irrigation areas
- ➢ Integrated with Beacon - Maintenance and Budgeting System to pull invoice payments to utility vendors together with non-state departmental chargebacks
- ➢ Integrated with Navigator - Space and Asset Management System
- ➢ Ability to upload to other systems or agencies
- ➢ Utility usage projections
- ➢ Graphs and charts on usage and dollars
- ➢ Rebate calculations
- ➢ Consumption trend analysis
- ➢ Reports by department, by meter, by rooms, by building and by campus through hosted services
- ➢ Cloud-based and requires no major equipment outlays
- ➢ Multi-level password and IP security access and restriction
